SUMMARY

Backend software engineer specializing in Laravel and PHP, driven by building resilient, scalable architectures. My core strengths lie in designing robust relational database schemas, engineering clean RESTful APIs, and implementing performance-tuning strategies like targeted caching and query optimization. I approach development with a strict focus on end-to-end system reliability and clean, maintainable code. I thrive when taking full ownership of backend infrastructure, consistently delivering secure, production-ready solutions that handle real-world load seamlessly.

EXPERIENCE

Backend Software Engineer

Axis Web Art Pvt. Ltd.

Nov 2023 – Present

Sardarshahar, Rajasthan

- Architected the core backend for the company's flagship e-commerce and subscription platform using **Laravel**. Designed a normalized relational database schema and developed a **Sanctum**-secured REST API to serve as the single source of truth for web and mobile clients.
- Engineered the critical billing and logistics pipelines by integrating **Stripe**, **Razorpay**, and the **Shopify Admin GraphQL API**. Built resilient webhook handlers with strict idempotency checks to guarantee data consistency and prevent duplicate charges during network timeouts.
- Maintained high API throughput as system traffic grew by decoupling heavy workloads from the HTTP request lifecycle. Offloaded complex inventory syncing, transactional emails, and bulk push notifications to **Redis-backed Laravel Queues**.
- Reclaimed engineering hours by building a comprehensive internal back-office suite using **Filament PHP**. Delivered robust data tables, role-based access controls, and custom workflows, empowering the operations team to manage user tiers, process refunds, and pull analytics independently.

Junior Laravel Developer

TechZento Solutions

May 2023 – Nov 2023

Remote

- Developed backend services and CRUD REST APIs in **Laravel**, hardening applications against SQL injection, XSS, and CSRF vulnerabilities through strict input validation and role-based authorization policies.
- Reduced key page-load times by **28%** by profiling and optimizing slow **SQL** queries, implementing eager loading to eliminate N+1 issues, and adding targeted indexes to high-traffic database columns.

PROJECTS

NDIS Provider Platform – Personal Side Project | *Laravel, MySQL*

- Designed a comprehensive backend architecture for Australian NDIS disability-services providers to handle participant intake, support-worker scheduling, and service delivery logging.
- Modeled complex real-world compliance rules from scratch, building relational schemas and Eloquent models to accurately track plan budgets, service categories, and audit trails required by strict NDIS price guides.

TECHNICAL SKILLS

Languages & Frameworks: PHP, JavaScript (ES6+), TypeScript, SQL, Laravel, Node.js, Express.js

APIs & Architecture: RESTful APIs, GraphQL, Webhook Integration, Shopify Admin GraphQL / Carrier Service APIs

Databases & Caching: MySQL, PostgreSQL, MariaDB, SQLite, Redis

Cloud & Integrations: AWS S3, Cloudflare Workers, Firebase (Cloud Messaging), Payment Gateways (Stripe, Razorpay, PayPal), WordPress, WooCommerce

Development & AI Tools: Git/GitHub, Composer, Prisma, Postman, VS Code, Google Gemini, OpenAI, Anthropic Claude

EDUCATION

Manipal University Jaipur

Bachelor of Computer Applications (BCA)

Jaipur, Rajasthan

Aug 2023 – Aug 2026

- Aggregate of **84%**, successfully completed alongside full-time software engineering work. Coursework: DBMS, DSA, Operating Systems, Computer Networks, Software Engineering, OOP.

ACHIEVEMENTS & CERTIFICATIONS

Award: Innovative Programmer Award (2024)

Certifications: Advanced Laravel; Full-Stack Web Development with Laravel & PHP
